

CK- | STEEL SOLAR CARPORT | GAZEBO

MAXIMO-185 (1-CAR)

STEEL SOLAR CARPORT | GAZEBO

INSTALLATION MANUAL

VERSION: 02.05.25 | ENG

Always use the most recent version of the installation manual before installing your Carport/Gazebo. The installation Manual is subject to change without notice. Please consult with CHIKOUSA to ensure you are utilizing the latest Install Manual.

BRIEF DESCRIPTION

The CHIKOUSA Steel Carport/Gazebo is a robust solar carport that can accommodate a wide range of panel sizes, with a max (North/South or Up/Down) span of 270". This structure can be installed with a 2-3 person crew, without the need of any heavy duty tools. The Installation should always be completed by trained professional and/or qualified individuals, who have been adequately instructed and trained about the tasks involved with the installation, including the usage of protective devices, protective measures, relevant provisions, safety regulations and local operating site conditions and have proven competence in all areas of the installation.

Please read carefully this installation manual and all other applicable documents before starting your installation. Please contact CHIKOUSA with any questions that you may have.

MAINTENANCE

- 1. When signs of rust appear, or when the paint is peeled or removed, you must take steps to remove the rust and paint the affected areas.
- 2. You must check the bolts once a year ensuring all connections are secure, and after any major storm or weather occurrence. Tighten all bolts according to torque specs.
- 3. If the columns of the structure are hit, you must replace the columns of the structure immediately.

WARNING

If any structural component of the system to include the column, beam, base plate, or rail are damaged they must be replaced immediately.

FOOTER WARNING

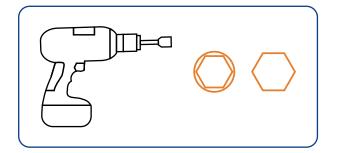

Anyone who plans to dig should call 811 or visit their state's 811 center's website a few business days before digging to request that the approximate location of buried utilities be marked with paint or flags so that you don't unintentionally dig into an underground utility line.

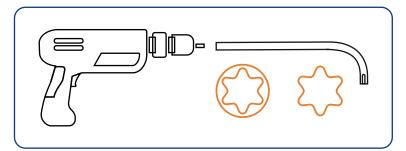

MEASUREMENT NOTE

Some measurements have been converted from MM to Inches. The accuracy of measurement can vary slightly from mm to inches. Some measurements are available in MM for detailed accuracy. The most critical measurement required is the Base Plate placement location. Please review the Construction Drawings for the Base Plate and Base Plate locations prior to installation.

REQUIRED INSTALLATION TOOLS

MAIN COMPONENTS

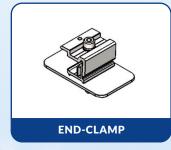

NOTE

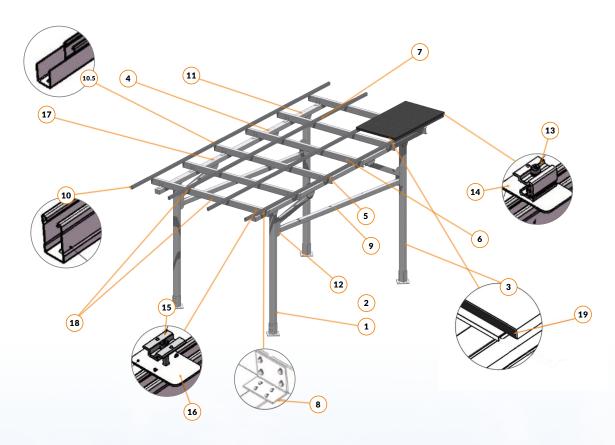

Customer needs to source materials for footings based on structural engineer specifications.

MAIN COMPONENTS

Overview

The following is a diagram that lists the main components of the CK- Carport System.

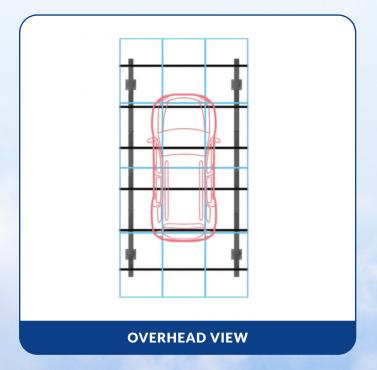

No	Description	QTY
1	Base Plate	4
2	Front Column 111"	2
3	Rear Column 126½"	2
4	Top Support Beam 228 1/16"	2
5	Lower Horizontal Beam 168½"	2
6	Diagonal Brace 47¼"	4
7	L-Angle Support 2241/16"	1
8	C Channel Fix Kit	12
9	C-Channel 143¾"	6
10	U-Rail 137¾"	8

No	Description	QTY
10.5	U-Rail Splice	4
11	Top Column Adapter 10 ¾16"	4
12	Low Beam & Diagonal Brace Adapter 16½"	4
13	End Clamp	24
14	End Clamp Share Plate	24
15	Mid Clamp	24
16	Mid Clamp Share Plate	24
17	Diagonal Brace Adapter 10¾.6"	4
18	Rubber Gasket	2
19	Rubber Strip

INSTALLATION STEPS

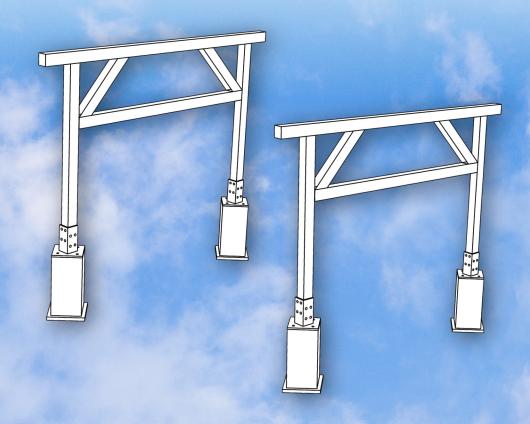

1. Build Base

Solution A, Build base

- ✓ Mark footer location according to the diagram. Verify all angles are square (See Attached Planset).
- ✓ Dig footers and make base with anchor bolts according to site conditions and system specifications and based on your structural engineer instructions for foundations requirements.
- ✓ If the ground is unlevel, ensure that all footer placements are level and at the same height regardless of the terrain elevation. Never install the structure tilted, the columns must always be straight.
- ✓ The structure's foundations should be calculated taking into account site conditions, soil type, seismic conditions, maximum wind and snow loads for the site location and the product mechanical loading specifications. In some cases, a geotechnical study is required. Please consult with your local structural engineer.
- ✓ In areas subject to freezing, footer depths may have to increase to resist freeze heave. Always consult a structural engineer to confirm footer depth and dimension.

Solution B, Concrete anchors

Concrete anchors can be utilized if approved by a structural engineer.

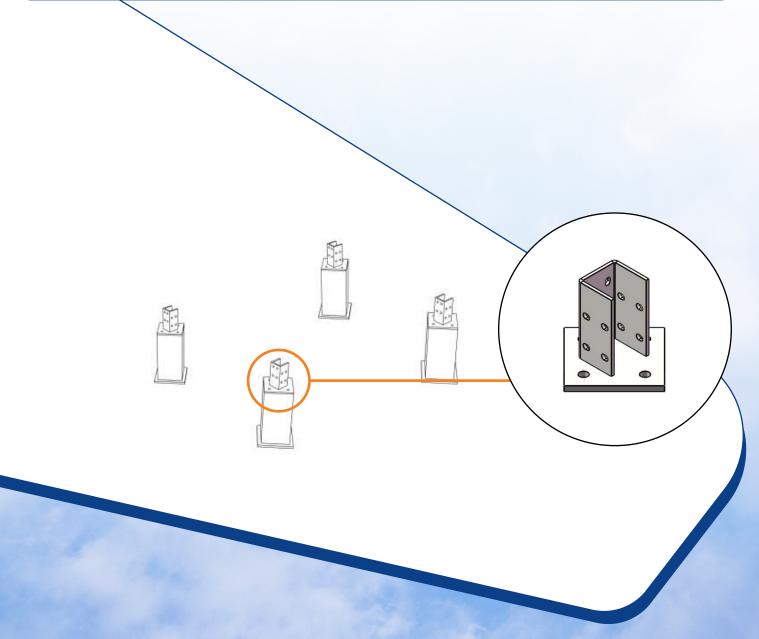

2. Install Base Plates

- ✓ Slide the column base plate over the concrete anchors and secure them. If you are using leveling nuts to level the column base plate. Correct any shifting if needed and repeat for the other three column base plates. Fill the gap between the base plate and the footing with Dry-pack non-shrink grout.
- ✓ Verify the distance between the front and rear column conform with the attached planset.

Products Name	Quantity
Base	4

3. Fix Adapter

- ✓ A. Fix Low Beam/Diagonal Brace Adapter to Front & Rear Columns
- ✓ B1. Attach C-Channel Fix Kit to Support Beam
- ✓ B2. Attach Top Column Adapter to Support Beam

Front Column: 111"

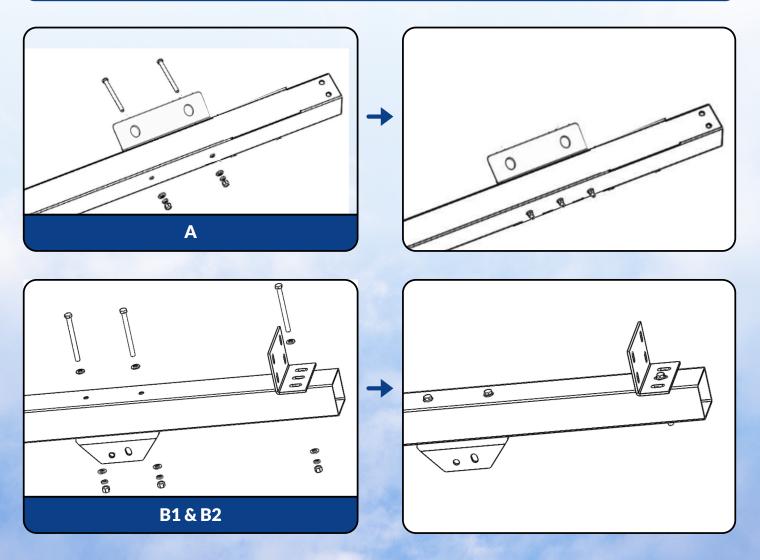

Rear Column: 126 1/2"

Low Beam/Diagonal Brace Adapter: 16 1/2"

Top Column Adapter: 10 3/16

Support Beams: 228 5/16

Products Name	Quantity
Top Column Adapter	4
M16*180mm Bolt Kits (1 big flat washer + 1spring washer + 1 nut)	32
Lower Horizontal Beam/Diagonal Brace Adapter	4
C-Channel Fix Kit	12

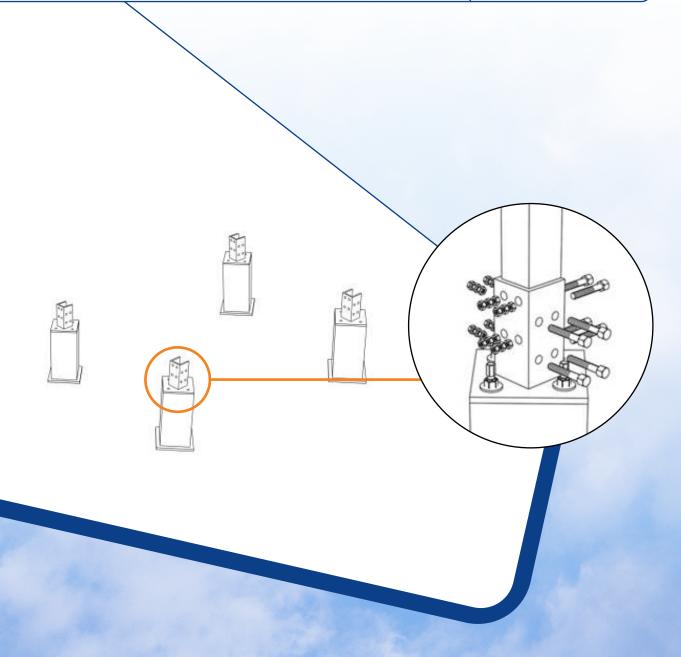

4. Connect Columns

✓ Attach Columns to base plate

Products Name	Quantity
Front Columns 111"	2
Rear Columns 126½"	2
M16 *180mm Bolt Kits (1 flat washer + 1 spring washer + 1 nut)	16

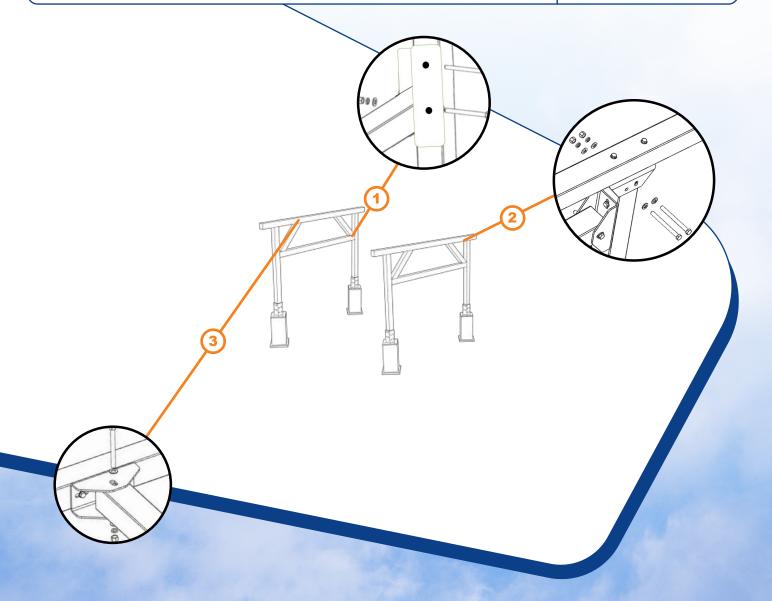

5. Connect Beams

- ✓ Connect Lower Horizontal Beam to front and rear Columns
- ✓ Connect Support Beam between front and rear columns on top
- ✓ Connect Diagonal Brace between Support Beam and Column

Products Name	Quantity
Lower Horizontal Beam 168 ½ "	2
Top Support Beam 228 5/16"	2
Diagonal Brace 47 ¾16"	4

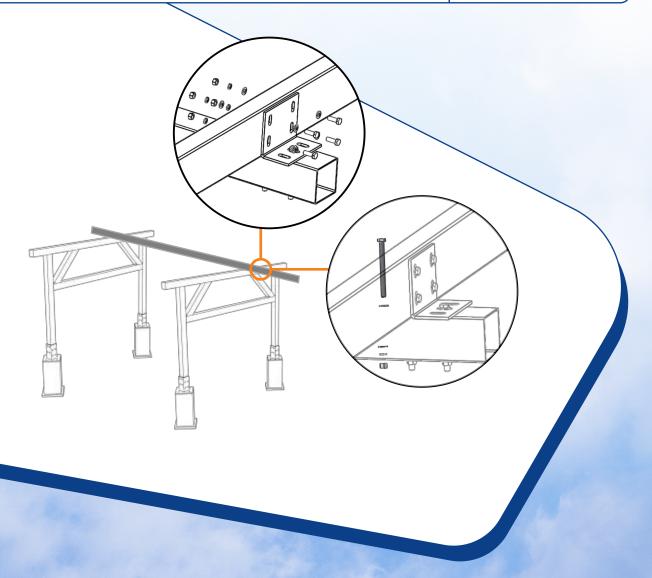

6. Fix C Channel

- ✓ Combine C-Channels with C-Channel Splice Kits
- ✓ Use C-Channel Fix Kit to connect C-channels to Top Support Beam
- ✓ Use M10 35mm Bolt Kits (1 flat washer + 1 spring washer + 1 nut)
- ✓ Use M16 180mm Bolt Kits (1 flat washer + 1 spring washer + 1 nut)

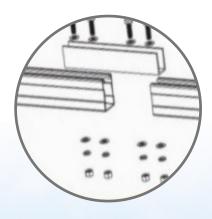

Products Name	Quantity
C Channel 143¾"	6
C-Channel Fix Kit	12
M10 35mm Bolt Kits (1 flat washer + 1 spring washer + 1 nut)	48
M16 180mm Bolt Kits (1 flat washer + 1 spring washer + 1 nut)	24

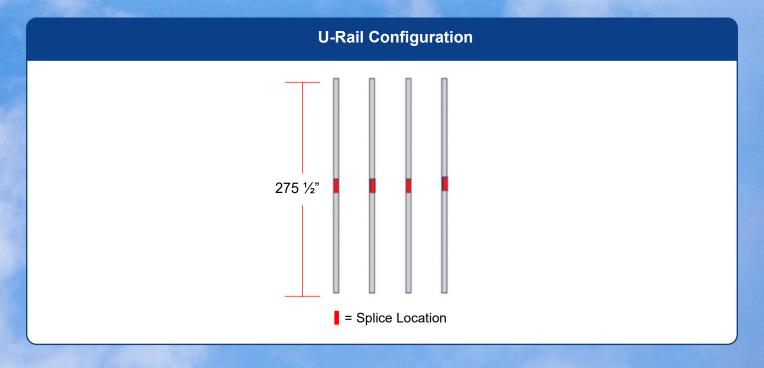

7. U-Rail Construction

1. Connect 2 U-Rails using the U-Rail Splice. The U-Rail will have pre-drilled holes at the ends of the U Rails where the splice connects using Hex Bolt M10*30 Once the U-Rails are connected the rail count will be 13qty. The U-Rail will also have 6 existing holes that will line up with the top of the C-Channels.

Products Name	Quantity
U-Rails 137¾"	8
U-Rail Splice Kits	4
Mid Clamps	24
End Clamps	24
M10*30 Bolt Kits	24

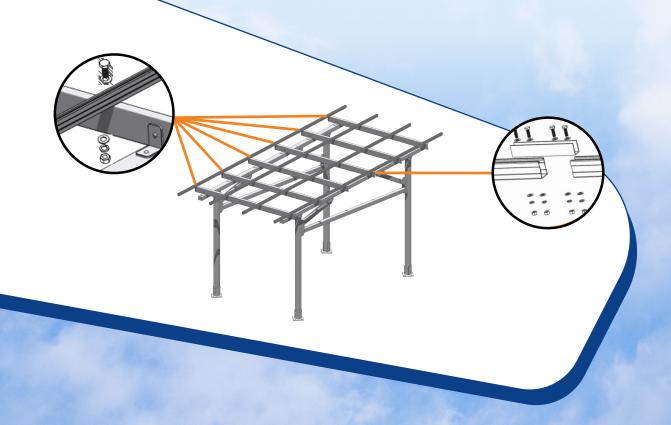

8. Fix U Rail

- Determine your 1st U-Rail attachment location on top of the C-Channels by utilizing the attached Math Module Placement Guide (you can start at either end) Your module width will determine your U-Rail attachment location. Once you determine the starting point for the 1st U-Rail ensure the starting distance is equal on the top C-Channel And the bottom C-Channel. You can mark all holes and drill C-Channel connection points.
- 2. Once your 1st U-Rail is secure, place end clamps into this U-rail.
- 3. Place a second U-rail on top of the C-channels with Mid-Clamps installed. Do not secure 2nd U-rail to C-channels until you verify the mounting distance between U-Rails is correct. Verify mounting distance Between U-Rails by mounting one module and ensuring proper spacing between of U-rails. The module should fit tight and should be square. Once verified attach 2nd U-Rail to C-channels using 6 Hex Bolts M10*30.
- 4. Install the remaining 11 U-rails connected and spliced U-Rails on top of C-Channels using 6 Hex Bolts M10*30 for each U-Rail.

Please Review Math Calculation in Appendix

Products Name	Quantity
U Rails 137¾"	8
M10*30 Bolt Kits	24

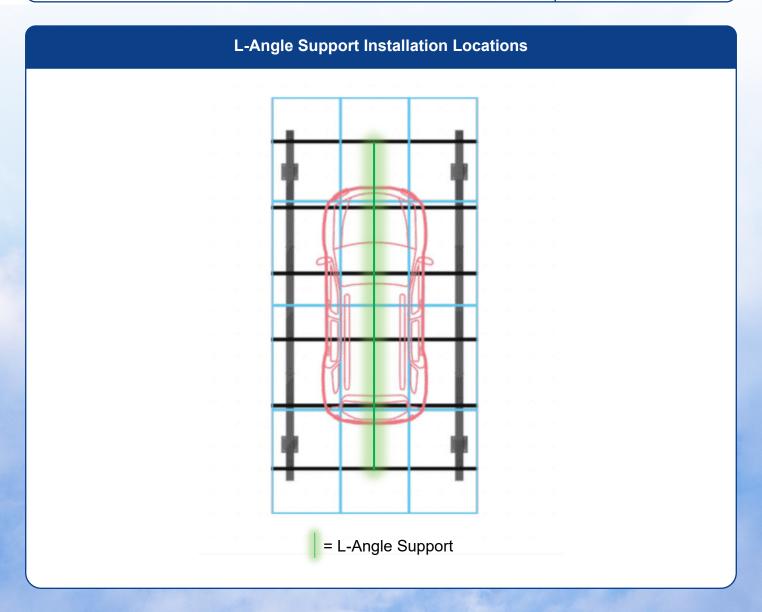

9. Install L-Angle Supports

L-Angle supports provide continuous stability and reduce any twisting or settling that may occur within the C-channel system. The L-Angle supports are attached to the bottom-center of the C-Channels using M8 screws. Each L-angle support will be attached with 6-qty M8 screws at 6 separate contact points on six separate C channels. The L-Angle support will run Perpendicular to the C-Channels and parallel to the Top Support Beam. The L-Angle supports will be installed in the center of each car bay (See Diagram Below).

Products Name	Quantity
L-Angle Support 224½"	1
M8*30 Bolt Kits	6

10. Install Solar Panels (With or Without Waterproofing)

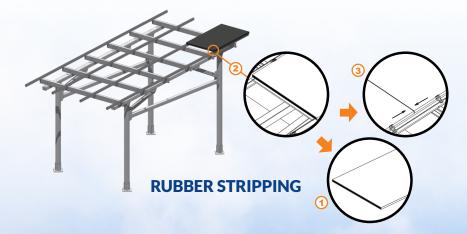

NOTE: The peal and stick rubber stripping is different than the Rubber Panel Gasket, the Rubber Panel Gasket is much bigger and thicker.

For Installation Without Waterproofing - Select a start point at one of the four corners, tightening the end clamps only to hold the module in place. Install one complete column of 3 or 4 modules (depending on your array size). Now install adjacent column by tightening the adjoining Mid clamps. Repeat this same process until all modules are installed. (Note: Tighten all end and mid clamps to torque specs.)

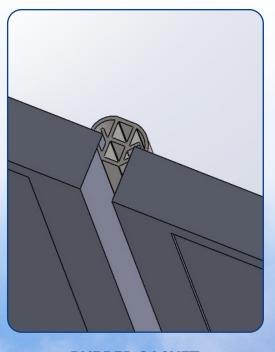

For Installation With Water Proofing - If using the rubber stripping for waterproofing, measure the width of the panel and cut the stripping to fit on the short side of the panel. Once cut, peel the paper off of the rubber stripping exposing the sticky adhesive. Place the sticky adhesive on the short side of the selected panels. Use 1 strip per seam or joint where 2 panels meet on the short sides of the panels. Do not apply more than one rubber strip per seam (every 2 panels gets 1 seam). Panels will share 1 rubber strip at locations where panels meet.

Once the Rubber Strip is attached, start the panel installation by placing one panel on top of the U-Rails, at one of four carport corners and tighten the end clamps. Repeat rubber stripping installation process for next panel. The next panel installed will be placed above or below the 1st panel installed depending on where you started, also only tighten the end clamp. Complete one column of panels 3 or 4 high, only tightening the end clamps. Once you have one column complete begin the next column installation with the column adjacent to the first column installed. Once the adjacent panels are placed next to the first column, tighten the mid clamps associated with the two columns.

Once 2 columns of panels are installed and mid clamps are all tightened to torque specs install the Rubber Panel Gasket in the seam that runs parallel to the U-Rails. Measure and Cut the Rubber Panel Gasket in order to accommodate for the Mid Clamp locations. Once measured and cut push the Rubber Panel Gasket down between the panel gap. Complete this process for all of the open gaps between panels. Ensure installation of Rubber Panel Gasket occurs after every interior column is installed to allow for physical access to the open gaps between panels that is to be covered by the Rubber Panel Gasket. The Rubber Panel Gasket will only be installed on the interior gaps that are running parallel with the U-Rails, on top of adjoining panels. Gently push the Rubber Panel Gasket down between panels until the top of the Rubber Panel Gasket is seated on top of the panels. There should be no gap between the bottom sides of the Rubber Panel Gasket and the top section of the panel frames.

Products Name	Quantity
Modules	9 or 12
Rubber Stripping	1 Roll
Rubber Panel Gasket	1 Roll

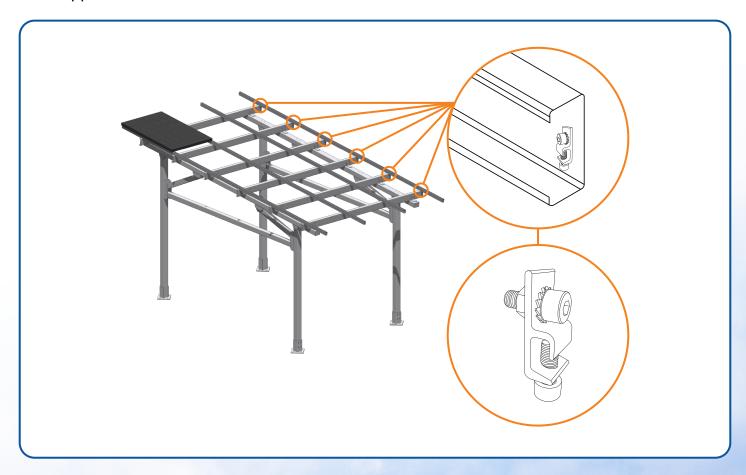

RUBBER GASKET

11. Grounding- Lug and Wiring

Install grounding lug at end of C-Channel on side of array that is most optimal for wire management. Ensure that all paint and any debris is removed from bonding site to achieve proper bonding connection. Attach each ground lug with a stainless steel nut then cross 8.4mm2 or greater than or equal to 8AWG copper wire through all 6 grounding lugs (fixed by M8*20 inner hex bolt), finally connect copper wire to the ground. The grounding lug completes a grounding function when fastened tight to connect all 6 C-Channels and copper wire.

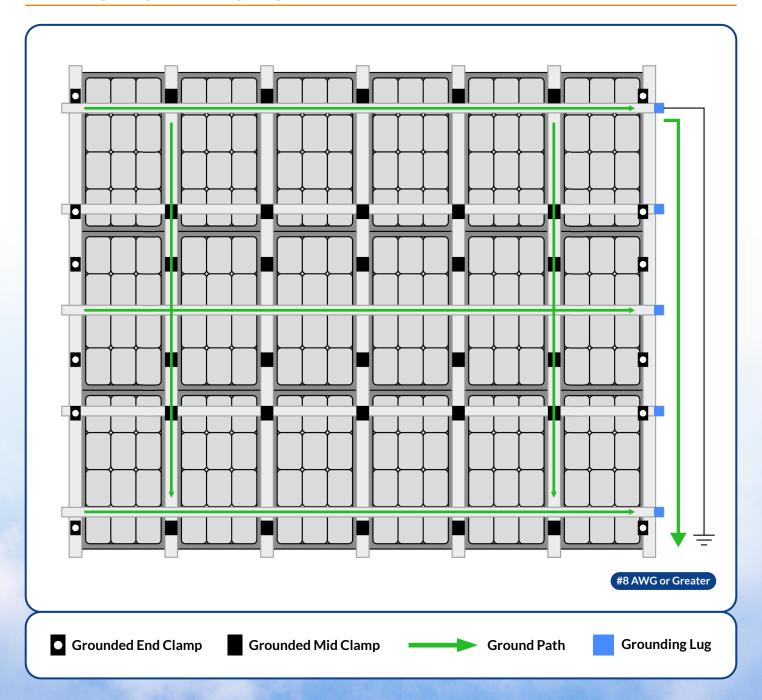

Electrical Characteristics of AWG Copper Wire

AWG	Diameter [inches]	Diameter [mm]	Resistance [Ohm / 1000ft.]	Resistance [Ohm/km]	Max Current [Amperes]	Max Frequency for 100% skin depth
6	0.162	4.1148	0.3951	1.295928	37	1100 Hz
7	0.1443	3.66522	0.4982	1.634096	30	1300 Hz
8	0.1285	3.2639	0.6282	2.060496	24	1650 Hz
9	0.1144	2.90576	0.7921	2.598088	19	2050 Hz
10	0.1019	2.58826	0.9989	3.276392	15	2600 Hz

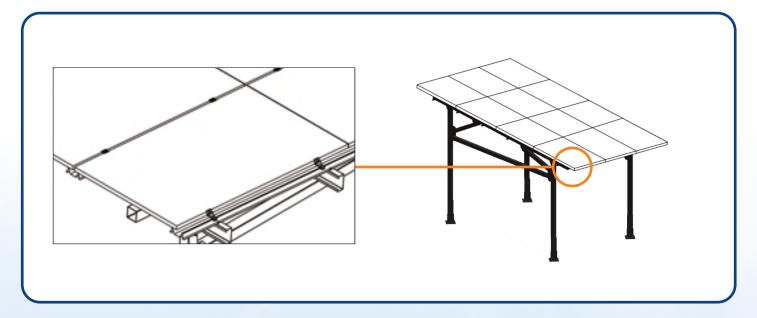

Grounding - Lug and Wiring Diagram

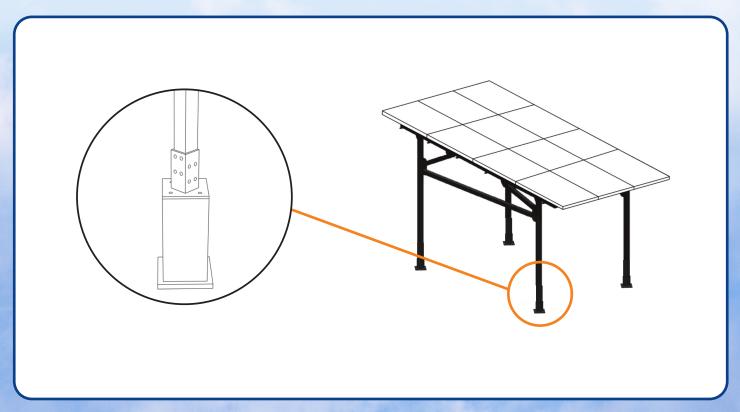

12. Final Check

- ✓ Check and verify that all components are properly fastened and installed properly in their correct positions and locations.
- ✓ Verify and re-adjust all components as needed within the structure.

13. Hide Footing (Optional)

✓ Cladding of 4 bases is an option with engineer approval.

TORQUE SPECIFICATION 1-CAR CARPORT

	Grounding Lug	Fix M Rail to C Purlin Screw M6.3 X 25	Mid/End Clamp M8	C Rail Splice Kit M 10 * 30	Rail Fix Kit to Column M16	Rail Fix Kit to C Rail M10	Structure (incl Column Adapter, Base Plate M16
